

Vastado Stansvormen

If continuity is your  
core business

## The right address for your thermoform cutting dies.

Vastado knows your sector and speaks your language. We understand that reliability and continuity are the key conditions for an efficient production process. Every day, we set our sights on optimizing your production process. This allows us to guarantee a high quality finished product. We use the best materials and state-of-the-art machinery to achieve this. Our employees are passionate about innovation, but are also aware of the vital role that craftsmanship plays in steel as a 'living material'.

### A challenge, not a risk

Vastado constantly asks the question 'how can we mobilize our activities in even smarter, better and more sustainable ways?' We take no risks to accomplish this. However, we do consider it our challenge to make the impossible possible.

### The highest quality under optimal conditions

A cutting blade is a highly precise, essential piece of equipment, calibrated to hundredths of millimetres. You cannot be selective enough when it comes to the production and development of this equipment. Vastado operates the plotters, cutting and bending machines, drilling and milling machines, lasers and wire cutters using advanced CAD-CAM systems. Design, production and testing is conducted in compliance with the highest quality standards. All cutting dies are manufactured in the Netherlands under optimal conditions and are supplied across the globe on a daily basis.

### Innovation for perfection

Recently, we have expanded our machinery with a high-quality laser-welding machine, a innovative piece of equipment capable of producing welds of well under 0.1 mm. This ensures very strong connections with hardly any thermal distortions and a perfect surface area. This makes final processing redundant, which benefits the quality and durability of the end-product.

### Knowledge and a sharp eye

At Vastado we treat our customers well. We are always willing to go the extra mile. Our technologies are constantly being refined, flexibility is paramount and keeping a sharp eye on manufacturing costs is more important than ever. Vastado therefore likes to participate with you in the thinking process. We know your success factors and pitfalls. Our knowledge enables you to work with greater efficiency while guaranteeing reliability.

### Up-to-date and years of experience

Vastado believes in specialization. We do what we excel in. You know your sector: we know your cutting die issues. We like to sit at the table with designers and engineers. Thanks to our technical know-how and years of experience, we are able to assist you proactively in minimizing set-up times and optimizing output.

### Service and warranty

Reliability involves more than the choice of materials or tools. Quality supplier Vastado is reliable, in both service and guarantee as well as transport and supply. Our communication lines are short and direct. We regularly arrange distribution. And our employees have unparalleled knowledge of your organization, machinery and our products. This enables us to guarantee a good working relationship, impeccable delivery and the continuity that gives you an edge over your competitors.

### High-quality laser welding

- ◆ Maximum bonding
- ◆ Low supply of heat
- ◆ Minimum distortion
- ◆ Small welding spots / thin continuing welds

#### Products and services

- ◆ Aluminium dies
- ◆ Wooden flat dies
- ◆ Individual blades
- ◆ Steel frames
- ◆ Stacking tools
- ◆ Milling
- ◆ Welding electrodes
- ◆ Laser welding
- ◆ Cutting die plates
- ◆ Centring blades
